1.2) Funktion:
$$f(x_1, x_2) = \begin{pmatrix} 5x_1x_2 \\ x_1^2x_2^2 + x_1 + 2x_2 \end{pmatrix}$$

Decobi-Metrix: $Df(x_1, x_2) = \begin{pmatrix} 5x_2 & 5x_1 \\ 2x_1x_2^2 + 1 & 2x_2x_1^2 + 2 \end{pmatrix}$

The der stelle $x^{(1)} = \begin{pmatrix} 1 \\ 2 \end{pmatrix} \implies Df(1, 2) = \begin{pmatrix} 1 \\ 3 \end{pmatrix} = \begin{pmatrix} 1 \\ 3 \end{pmatrix}$

b) Fig. 122. (1)
$$(x_1^2 + x_2^2) + x_3^2$$

$$exp(x_2^2 + x_3^2) + x_4^2$$

$$\frac{1}{x_2^2 + x_1^2} + x_2^2$$

$$\frac{1}{x_2^2 + x_2^2} + x_2^2$$

$$\frac{1}{x_1^2 + x_2^2} +$$
